## 1 Section 6.1, Q8

Provide reasons why each of the following is not an inner product on the given vector spaces.

- (a)  $\langle (a, b), (c, d) \rangle = ac - bd$  on  $\mathbb{R}^2$ .
- (b)  $\langle A, B \rangle = \text{tr}(A + B)$  on  $M_{2 \times 2}(R)$ .
- (c)  $\langle f(x), g(x) \rangle = \int_0^1 f'(t)g(t) dt$  on  $P(R)$ , where  $'$  denotes differentiation.

### 1.1 (a)

Suppose this is an inner product. Then  $\langle x, x \rangle \geq 0$  should hold  $\forall x \in \mathbb{R}^2$ .

Let  $x = (1, 10)$ . Then  $\langle x, x \rangle = \langle (1, 10), (1, 10) \rangle = 1^2 - 10^2 = -99 < 0$ .

Therefore, this is not an inner product.

### 1.2 (b)

Suppose this is an inner product. Then  $\langle x, x \rangle \geq 0$  should hold  $\forall x \in M_{2 \times 2}(R)$ .

Let  $x = \begin{pmatrix} -1 & 0 \\ 0 & -1 \end{pmatrix}$ . Then

$$\langle x, x \rangle = \text{tr}(x + x) = -2 - 2 = -4 < 0.$$

Therefore, this is not an inner product.

### 1.3 (c)

Suppose this is an inner product. Then  $\forall f, g \in P(\mathbb{R}), \overline{\langle g, f \rangle} = \langle f, g \rangle$  should hold.

Let  $f(x) = x, g(x) = x^2 + x$ .

Then

$$\langle f, g \rangle = \int_0^1 1(x^2 + x) dx = \frac{5}{6}.$$

$$\overline{\langle g, f \rangle} = \overline{\int_0^1 (2x + 1)x dx} = \frac{7}{6}.$$

Therefore  $\overline{\langle g, f \rangle} \neq \langle f, g \rangle$  for some  $f, g \in P(\mathbb{R})$ .  
Hence, this is not an inner product.  
Done.

---

## 2 Section 6.1, Q17

Let  $T$  be a linear operator on an inner product space  $V$ , and suppose that  $\|T(x)\| = \|x\|$  for all  $x$ . Prove that  $T$  is one-to-one.

Note that because we have  $\|T(x)\| = \|x\|$ . Then  $\forall x \in V$ , with  $x \neq 0$  we have

$$\|T(x)\| = \|x\| > 0.$$

Therefore  $x \neq 0$ .

Note that  $\|T(0)\| = \|0\| = 0$ , which implies

$$T(0) = 0.$$

Hence  $N(T) = \{0\}$ .

Hence,  $T$  is one-to-one.

Done.

---

## 3 Section 6.1, Q18

Let  $V$  be a vector space over  $F$ , where  $F = \mathbb{R}$  or  $F = \mathbb{C}$ , and let  $W$  be an inner product space over  $F$  with inner product  $\langle \cdot, \cdot \rangle$ . If  $T: V \rightarrow W$  is linear, prove that  $\langle x, y \rangle' = \langle T(x), T(y) \rangle$  defines an inner product on  $V$  if and only if  $T$  is one-to-one.

### 3.1 If part

In the if part, we assume  $T$  is one-to-one and try to prove  $\langle \cdot, \cdot \rangle'$  is an inner product.  
One-to-one implies  $N(T) = \{0\}$ . Then  $\forall x (\neq 0) \in V, T(x) \neq 0$ . Therefore

$$\langle x, x \rangle' = \langle T(x), T(x) \rangle > 0.$$

Because  $\langle \cdot, \cdot \rangle$  is an inner product.

Also note that  $\forall x, y, z \in V, \forall c \in F$ ,

$$\begin{aligned} \langle x + z, y \rangle' &= \langle T(x + z), T(y) \rangle = \langle T(x) + T(z), T(y) \rangle = \langle T(x), T(y) \rangle + \langle T(z), T(y) \rangle \\ &= \langle x, y \rangle' + \langle z, y \rangle'. \end{aligned}$$

Besides,

$$\langle cx, y \rangle' = \langle T(cx), T(y) \rangle = \langle cT(x), T(y) \rangle = c\langle T(x), T(y) \rangle = c\langle x, y \rangle'.$$

And finally,

$$\overline{\langle x, y \rangle'} = \overline{\langle T(x), T(y) \rangle} = \langle T(y), T(x) \rangle = \langle y, x \rangle'.$$

Based on all above,  $\langle \cdot, \cdot \rangle'$  is an inner product.

### 3.2 Only if part

In the only if part, we have  $\langle \cdot, \cdot \rangle'$  is already an inner product and try to prove  $T$  is injective.

Note that  $T$  is linear, then  $T(0) = 0$  must hold.

Becasue  $\forall x (\neq 0) \in V, \langle x, x \rangle' = \langle T(x), T(x) \rangle > 0$ . Therefore  $\forall x \neq 0, T(x) \neq 0$ .

Therefore  $N(T) = \{0\}$ , follows that  $T$  is injective.

Done.

## 4 Section 6.1, Q19

Let  $V$  be an inner product space. Prove that

- (a)  $\|x \pm y\|^2 = \|x\|^2 \pm 2\Re \langle x, y \rangle + \|y\|^2$  for all  $x, y \in V$ , where  $\Re \langle x, y \rangle$  denotes the real part of the complex number  $\langle x, y \rangle$ .
- (b)  $|\|x\| - \|y\|| \leq \|x - y\|$  for all  $x, y \in V$ .
